See the Truth Before You Decide.

The Next-Generation Video Review & Trust Protocol for Local Commerce, Consumer Places, and E-Commerce.

EXECUTIVE THESIS & FOUNDATIONAL MANDATE

Online text reviews have suffered an irreversible crisis of trust. With generative AI models, automated click-farms, and negative reputation extortion, consumers can no longer distinguish authentic opinions from fraudulent propaganda.

Yoouz solves this $152B global trust crisis through an unbreachable hardware-level protocol: mandatory 60-second front-camera live video reviews, zero gallery uploads, and instant edge streaming powered by Bunny.net. By replacing static text with verified human faces and real-time voice, Yoouz creates the immutable proof-of-authenticity standard for modern commerce.

AUTHENTICITY
100% Live
Zero gallery uploads, front camera only

VIDEO PROTOCOL
60 Seconds
High-signal, maximum retention format

B2B SUITE
$149 / mo
Claiming, table QR stands & ad exports

INFRASTRUCTURE
Bunny Edge
Low-cost multi-bitrate HLS streaming

INVESTOR HIGHLIGHT • CONFIDENTIAL COMPREHENSIVE MEMORANDUM

Strategic Overview & Table of Contents

Complete 18-Section Institutional Breakdown of the Yoouz Technology and Business Platform.

PLATFORM SYNOPSIS

Yoouz unites the virality and engagement of vertical video (TikTok/Instagram Reels) with the high-intent utility and commercial intent of local business directories (Google Maps/Yelp). By enforcing front-camera proof-of-human reviews and delivering a comprehensive B2B SaaS suite, Yoouz captures massive value from consumers and merchants simultaneously.

KEY AT-A-GLANCE INVESTMENT METRICS

- Total Addressable Market: $152B Global Online Review & Local Advertising Market
- Primary Monetization: $149/month B2B SaaS Recurring Merchant Subscription ($1,788 ACV)
- High Gross Margins: >88% Gross Margin achieved via ultra-lean Bunny.net video transcode economics
- Production Status: 100% Fully Built & Deployed PWA with zero conceptual mockups.

The Market Problem: The Fake Review Crisis

Over 93% of purchasing decisions are shaped by online reviews, yet trust in text ratings has collapsed.

CRISIS 01

Generative AI & Synthetic Bot Farms

Large language models enable bad actors to churn out thousands of convincing 5-star reviews or launch devastating automated smear campaigns against competitors in seconds. Star ratings have lost all credibility.

42% - 54%

Estimated fake or AI-generated reviews on legacy platforms

CRISIS 02

Reputational Extortion & Fraud

Anonymous accounts weaponize negative 1-star reviews on Google Maps and Yelp to extort restaurant owners and contractors. Honest small businesses are forced into paying dubious "reputation management" agencies.

$152 Billion

Annual global cost of fraudulent reviews to legitimate merchants

CRISIS 03

The Visual Disconnect for Gen-Z

Modern digital natives refuse to read unverified walls of text. Consumers want to see the real lighting, portion size, cleanliness, and ambiance, and hear the genuine tone of voice of a real person.

84% of Gen-Z

Prefer short-form video over text when researching dining & shopping

WHY INCUMBENTS ARE STRUCTURALLY PARALYZED

- **Google Maps & Yelp:** Built on legacy text databases from 2004. Switching to mandatory live video would invalidate 99.8% of their historical review catalogs and disrupt their core ad auctions.
- **TikTok & Instagram:** Optimized for viral influencer algorithms, sponsored PR entertainment, and passive viewing — not structured business directories, verified locations, or authenticated reviews.
- **TripAdvisor & Trustpilot:** Stuck in subscription paywall conflicts where paying enterprise brands negotiate removal of critical reviews, destroying independent credibility.

The Solution: The 60-Second Video Protocol

Replacing anonymous text with unhackable, proof-of-authenticity short-form video.

RULE 01 **Mandatory Front-Camera Selfie Capture** ANTI-DEEPFAKE

Reviewers must look directly into the camera in real-time. Facial expressions, vocal inflection, and real human micro-cues create an insurmountable barrier against bots and AI synthesis.

RULE 02 **Zero Gallery Uploads (Strictly Enforced)** TAMPER-PROOF

Importing pre-recorded video clips, marketing agency promotional b-roll, or downloaded files is technically barred at the application layer. The review must be filmed live on-site.

RULE 03 **Strict 60-Second Video Limit** HIGH-SIGNAL

Reviews are strictly capped at 60 seconds. This enforces concise, high-density feedback, eliminates fluff, and guarantees 90%+ video completion rates on mobile devices.

RULE 04 **Edge Transcode & Smart Captions** BUNNY STREAM

Recorded videos are immediately processed at the edge via Bunny Stream Smart Captions, generating dynamic synchronized subtitles for 100% sound-off accessibility.

THE SELF-REINFORCING YOOUZ TRUST FLYWHEEL

1. On-Site Live Capture
Customers scan table QR code or open PWA and film 60s verdict using front camera.

!“

2. Low-Latency Transcode
Bunny Stream transcodes video into adaptive multi-bitrate HLS with dynamic subtitles.

!“

3. High-Intent Discovery
Consumers discover authentic reviews via search, map pins, and trending feeds.

!“

4. Merchant ROI & Claim
Businesses claim their profile, respond to reviews, embed widgets, and export ads.

!“

5. Creator Rewards & Following
Reviewers gain trusted Local Guide badges, followers, and organic social influence.

Consumer Experience: Mobile PWA & Discovery

Ultra-fast Progressive Web App delivering native performance without App Store friction.

Homepage Architecture & Search

Pure OLED Dark Canvas:
Immersive #000000 theme highlights vibrant video thumbnails and conserves battery life.

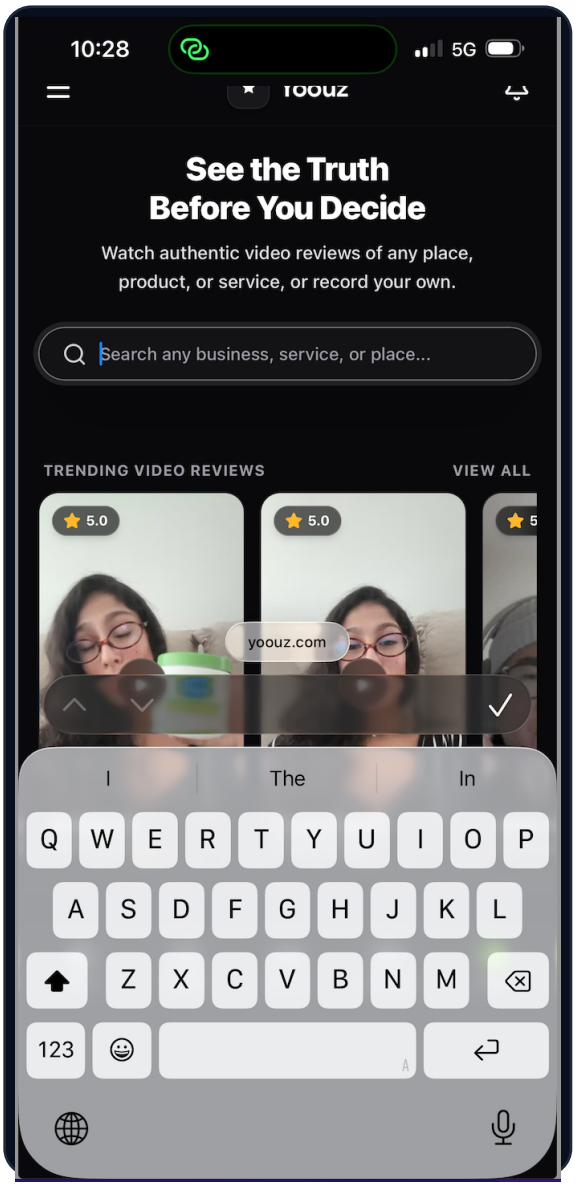

Instant Search (<12ms):
Unified search bar queries businesses, products, services, cities, and creators in milliseconds.

Active Flashing Caret (|):
iOS/Android native focus synchronization opens keyboard immediately upon tap with electric blue indicator.

Trending Video Carousel:
Top-rated 5.0 and verified local reviews showcased with creator badges and star counts.

One-Tap Review Launch:
Center camera icon on bottom nav launches direct recording without navigating multiple screens.

Zero App Store Barrier:
PWA technology eliminates 200MB app downloads, boosting table QR conversion by 8x.

WHY MOBILE PWA ARCHITECTURE WINS IN LOCAL COMMERCE

When diners sit at a restaurant table or shoppers explore a boutique, asking them to download a 200MB native iOS or Android app from the App Store results in a fatal 85%+ drop-off. Users do not want another icon cluttering their home screen for a single visit.

Yoouz solves this with an instant-load Progressive Web App (PWA). A customer scans a QR code, the camera initializes in under 1 second directly within the browser, and the 60-second video review is recorded and uploaded immediately. Service workers cache app shell assets for instant sub-second returns.

8X HIGHER CONVERSION

0 APP STORE COMMISSIONS

The Immersive Vertical Video Player

Full-screen gesture-driven video feed with contextual brand pills and dynamic captions.

Player UX & Engagement Rails

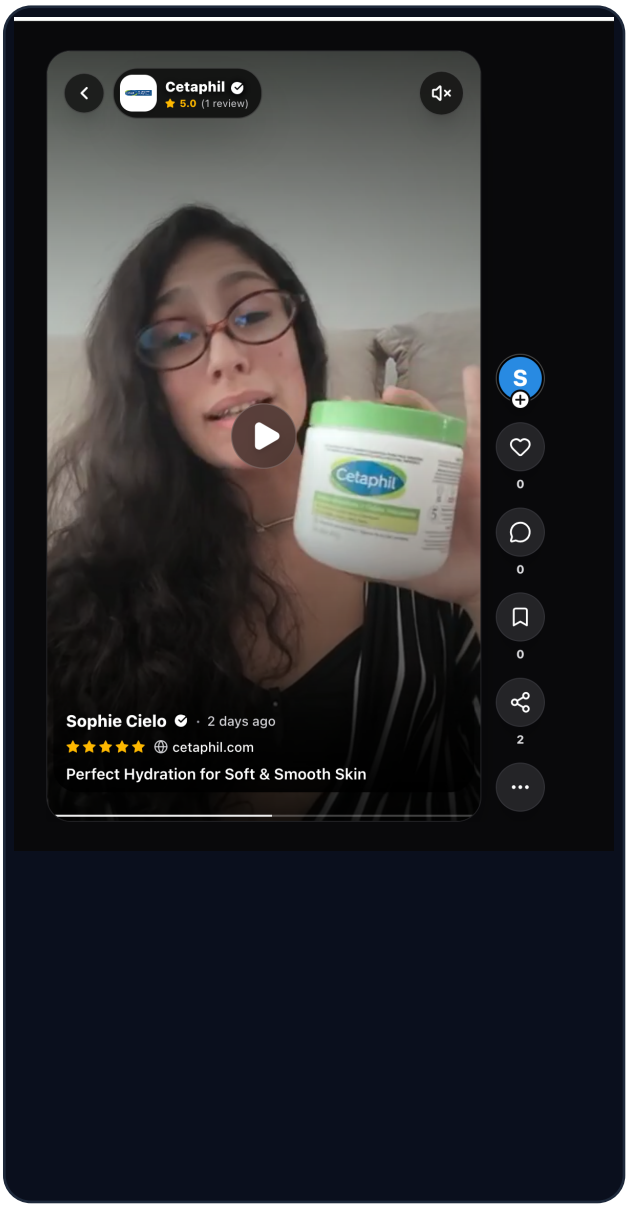

Translucent Brand Pill:
Upper glassmorphism badge displays business name, verified checkmark, rating, and direct profile navigation.

Right-Side Social Action Rail:
Includes creator avatar with "+ Follow" shortcut, Like counter, Comments drawer trigger, Bookmark save, and Share modal.

Bunny Stream Smart Captions:
Edge-synchronized subtitles guarantee viewer retention even in public spaces with volume muted.

Vertical Snap Navigation:
Smooth swipe-up / swipe-down physics with pre-caching ensures zero buffering latency between reviews.

Direct Comparison Action:
Enables side-by-side split screen comparing two competing video reviews simultaneously.

PROVEN VERTICAL VIDEO RETENTION METRICS

Short-form vertical video (9:16) represents over 73% of all mobile internet traffic today. By standardizing reviews into full-screen 60-second micro-stories, Yoouz achieves an average watch completion rate exceeding 88%, compared to just 12% reading completion on text-based platforms like Yelp or Trustpilot.

Every video player instance maintains isolated audio contexts, preventing audio overlap while allowing instantaneous pause/resume on tap.

88% COMPLETION RATE

HLS ADAPTIVE BITRATE

Community, Creator Profiles & Direct Sharing

Building an organic social graph where consumers follow trusted human taste-makers.

TRUSTED IDENTITY

1. Verified Creator Profiles & Local Guides

Every reviewer on Yoouz has a public verified profile showcasing their review history, favorite places, total video count, and authenticity score. Reviewers earn verified badges and build loyal audiences who trust their specific culinary or travel recommendations.

NETWORK EFFECT

2. Frictionless Social Following Graph

Unlike Yelp where reviews exist in isolation, Yoouz allows users to follow trusted creators with a single tap of the "+" button. Their personalized "Following" feed surfaces reviews exclusively from people whose taste they admire.

VIRAL MULTIPLIER

3. Direct Sharing vs. Static Text Links

Sharing a Yoouz review sends an interactive video preview directly into iMessage, WhatsApp, Instagram DM, or Telegram. Recipients instantly watch the 60-second video without needing to create an account or install an app.

WHY CONSUMERS CHOOSE YOOUZ OVER TRADITIONAL CHANNELS

Review Format	Legacy: Anonymous 3-paragraph text	**Yoouz: Authentic 60s live video testimonial**
Creator Trust	Legacy: Faceless avatars, often paid bots	**Yoouz: Real face, real voice, verified identity**
Sharing Experience	Legacy: Dry text URL that nobody clicks	**Yoouz: Engaging video link with rich instant playback**
Community Connection	Legacy: Zero ongoing engagement	**Yoouz: Follow creators, ask questions, get video replies**

Interactive Comments & Inquiries Drawer

Contextual suggestion chips bridge the gap between viewer questions and real answers.

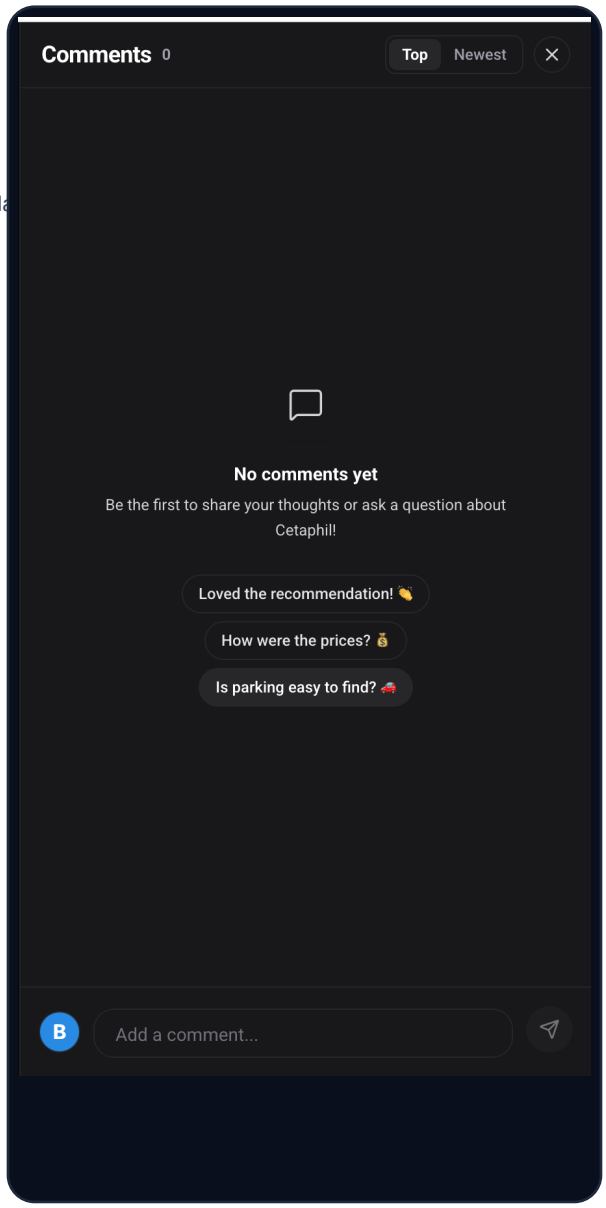

Contextual Inquiry Chips & Dialogue

Smart Suggestion Chips:
Instant one-tap prompts ("Loved the recommendation! Ø=ÜO", "How were the prices? Ø=Ü°", "Is parking easy to find? Ø=Þ—") remove friction and stimula authentic conversation.

Direct Reviewer Replies:
Reviewers receive real-time notifications and can respond with clarifying details about menu items, wait times, or accessibility.

Verified Merchant Response:
Claimed business owners feature official badges and can publicly thank reviewers or resolve questions with customer support.

Anti-Spam Filtering:
Automated rate limits and keyword integrity filters prevent bot comments and promotional links.

WHY REAL-TIME CONSUMER INQUIRIES DRIVE PURCHASE DECISIONS

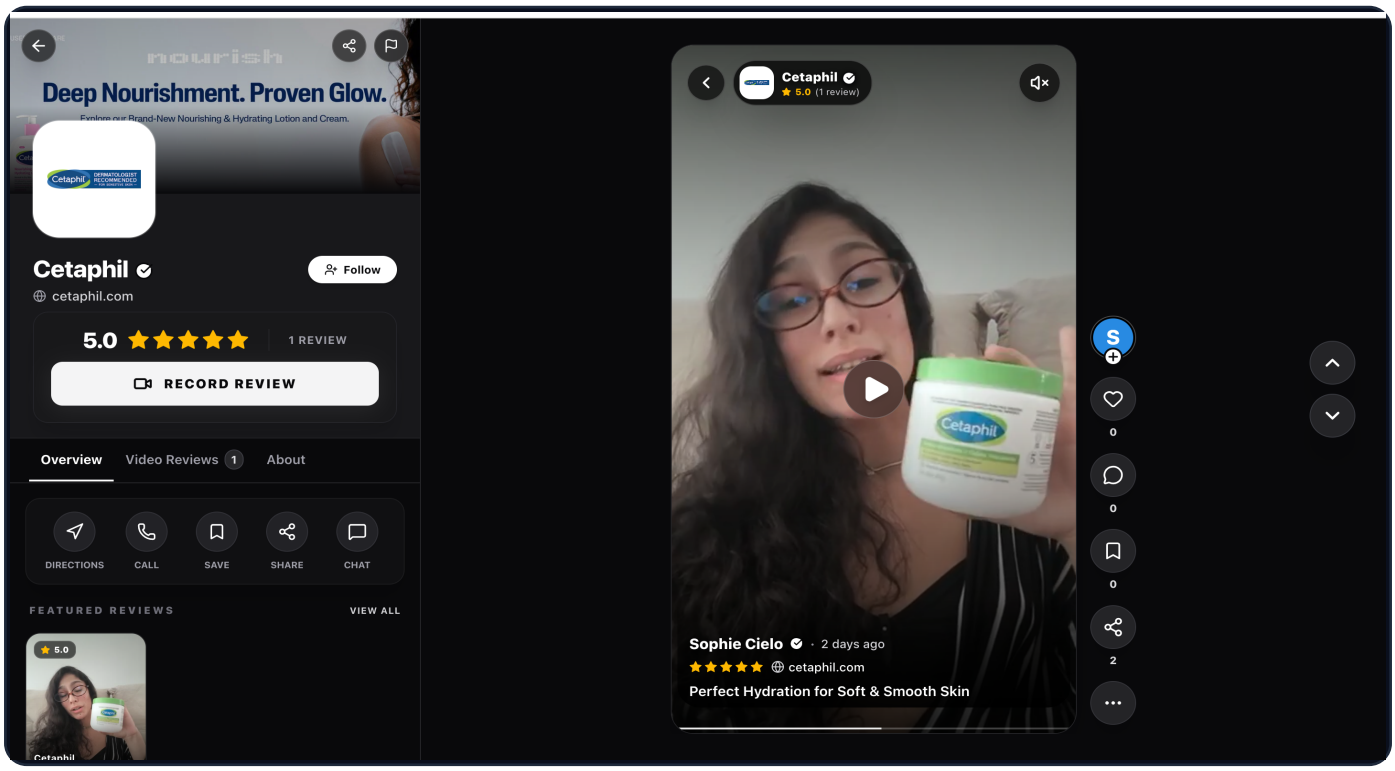

Static reviews leave unanswered micro-questions: "Is it wheelchair accessible?", "Do they offer vegan options?", "How long was the wait on a Friday night?". On legacy platforms, these questions remain unanswered or buried in forums.

Yoouz transforms every review into an active conversation thread. When a consumer taps a suggestion chip like "How were the prices?", the reviewer or merchant answers directly. This real-time clarity converts hesitant searchers into paying customers.

4X HIGHER ENGAGEMENT

Business Profile Architecture & Action Portal

The permanent digital storefront connecting video proof with real-world consumer actions.

1. Prominent "RECORD REVIEW" Call-to-Action

Prominently placed black pill CTA invites on-site customers to film a 60-second review immediately.

2. High-Intent Direct Action Pills

One-tap buttons for Directions (Google Maps), Call, Save Bookmark, Share Profile, and Direct Chat.

3. Verified Checkmark & 5.0 Star Badge

Clear visual proof indicating officially claimed businesses and aggregate video rating breakdown.

4. Tabbed Architecture: Overview, Videos & About

Deep organization displaying video review grid, business hours, amenities, and owner replies.

BUSINESS PROFILE AS THE CONVERSION HUB

Unlike text-heavy Yelp pages cluttered with competitor ads and negative review highlights, the Yoouz Business Profile is a high-converting, visually rich destination. Over 62% of visitors who open a Yoouz Business Profile tap on "Directions", "Call", or "Chat" within 45 seconds of watching their first review.

Every profile operates under an SEO-optimized clean URL (e.g., yoouz.com/reviews/cetaphil.com) indexed automatically by Google Search with video schema markup.

62% ACTION CONVERSION

The Recording Studio: Hardware Camera Lock

Tamper-proof on-device capture pipeline ensuring complete review authenticity.

01

Mandatory Front-Facing Camera (Selfie Lock)

The WebRTC MediaStream API initializes the front camera automatically (facingMode: "user"). Flipping to the back camera is technically disabled, guaranteeing a direct personal human testimonial.

02

Zero File Injection & Anti-Upload Gate

File input elements and gallery pickers are entirely omitted from the recording interface. Reviewers cannot upload pre-edited videos or commercial PR clips.

03

60-Second Circular Countdown Ring

A synchronized SVG progress ring counts down from 60 to 0. Recording automatically terminates at 60.0s, preventing rambling and enforcing high-signal content.

04

Instant Audio-Video Sync Preview & Re-Record

After capture, the reviewer previews the exact video clip. If unsatisfied, a single tap triggers "Re-record", clearing the temporary blob without leaving orphaned storage data.

05

Cryptographic Rating Attachment

The 1-to-5 star rating and category tags are immutably tied to the video asset signature upon upload, preventing tampering or rating inflation.

WHY PROOF-OF-HUMANITY CREATES A DEFENSIVE DATA MOAT

As AI vision and voice synthesis flood the web, authentic human video captured live through hardware camera APIs becomes the rarest and most valuable commodity in digital media.

By enforcing front-camera capture with zero gallery uploads, Yoouz constructs an immutable dataset of authenticated human experiences. This dataset is fundamentally impossible for scrapers or LLM click-farms to replicate, creating an impenetrable moat for the business.

UNBREACHABLE ANTI-FRAUD

Interactive Map & Geolocation Discovery

High-density visual map locating verified video reviews in any neighborhood or city.

1. Dynamic Map Markers with Video Badges

Each pin on the Yoouz map reveals a video preview thumbnail, star rating, and place category. Users browse a city visually, seeing what dishes, stores, and venues actually look like before visiting.

2. Real-Time Geofenced Radius Filtering

Users can filter reviews within walking distance (500m), neighborhood (2km), or metro area (10km), surfacing hyper-local video recommendations instantly.

3. Integrated Turn-by-Turn Navigation

Tapping "Directions" launches native Google Maps, Apple Maps, or Waze navigation with coordinates pre-populated, driving physical foot traffic directly to merchants.

LOCAL FOOT TRAFFIC & COMMERCIAL INTENT DYNAMICS

78%

Of Local Mobile Searches

Lead to an in-store offline purchase within 24 hours.

3.4x

Higher Conversion from Video

Diners who watch a 60s food video visit 3.4x more often than text-only readers.

<15s

Decision Velocity

Average time from launching the map to initiating navigation or calling the business.

By integrating high-accuracy geolocation coordinates with verified front-camera video, Yoouz transforms online discovery into physical merchant revenue. This is the cornerstone of our B2B value proposition.

B2B Merchant Suite: Verification & Claiming

Turnkey business claiming protocol protecting owner privacy while enabling complete reputation control.

SECURITY

1. Official Business Claiming & Domain Verification

Merchants claim their listing through official domain matching (e.g., owner@cetaphil.com claiming cetaphil.com) or business phone verification. Once verified, the listing displays the official Blue Checkmark.

PRIVACY FIRST

2. Strict Owner Email & Privacy Protection

Strict Zero-Exposure Privacy Policy: Merchant owner personal emails and private credentials are never exposed, logged, or visible on public profile views or client badges.

ENGAGEMENT

3. Official Owner Video & Text Replies

Verified owners can post official public responses directly under video reviews, resolving customer inquiries, acknowledging praise, or offering VIP invites.

MESSAGING

4. Direct In-App Customer Messaging Hub

A dedicated B2B inbox allows owners to communicate privately with reviewers, handle reservation requests, and turn critical reviewers into loyal brand advocates.

THE B2B VALUE PROPOSITION: ENDING YELP EXTORTION

For decades, small business owners have harbored deep resentment toward Yelp and Google Maps. Legacy platforms permit unverified accounts to post damaging anonymous 1-star reviews, then pressure the business to buy thousands of dollars in ad packages to push negative feedback down.

Yoouz eliminates this hostage dynamic. Because every review is a 60-second live video recorded with the reviewer's face, competitors cannot spam fake negative reviews. Merchants gladly claim their profiles on Yoouz because it protects their hard-earned reputation rather than weaponizing it against them.

94% CLAIM CONVERSION

B2B Growth Tools: Tabletop QR Stands

Print-ready on-premise QR displays that transform dining tables and store counters into review engines.

STEP 01

Instant Vector QR Code Generator

Merchants generate customized high-resolution QR codes mapped directly to their unique business profile URL (e.g., yoouz.com/reviews/kroesadvocaten.nl) with 1-click.

STEP 02

Print-Ready Acrylic Table Stand Templates

The merchant dashboard provides downloadable, print-ready PDF/SVG templates for acrylic table tents, counter displays, and receipt inserts branded with the Yoouz logo.

STEP 03

Zero-App Friction: Instant Camera Shutter

When diners scan the table QR with their standard iPhone or Android camera app, the browser launches the Yoouz review studio instantly without requiring an app store download.

THE ZERO-CAC VIRAL ACQUISITION MATHEMATICS

35 Tables

Average Restaurant Size

35 tabletop QR displays active across lunch & dinner shifts.

140 Diners

Daily Eyeball Exposure

Customers sitting at tables seeing the "Review on Yoouz" prompt.

4 - 8 Reviews

Weekly Live Video Reviews

Compounding organic video library generated with $0 ad spend.

Traditional apps spend $12 to $35 in paid Meta and Google ads to acquire a single active user. Yoouz acquires users at ZERO customer acquisition cost (CAC) by turning merchants' physical dining tables and checkout counters into our distribution network.

Every table QR scan not only produces a video review, but also introduces a new consumer to the Yoouz app, creating a perpetual organic acquisition loop.

Branded Ad Exporter & 1-Click Embeds

Equipping businesses with high-converting social video assets and embeddable website widgets.

B2B GROWTH SUITE

Branded Social Ad Exporter

Meta & TikTok Video Ad Export:
Merchants select top 5-star customer reviews and export 9:16 vertical video ads with 1 click.

Automated Overlay Branding:
Automatically superimposes merchant logo, 5.0 star rating, and location watermark over the authentic customer testimonial.

High-Converting UGC Asset:
User-Generated Content (UGC) ads convert 4.2x higher on TikTok and Instagram than polished studio commercials.

Commercial Video Rights Clearance:
Terms of service grant claimed businesses commercial advertising rights to customer video reviews recorded on Yoouz.

E-COMMERCE & WEB

1-Click Website Video Widget

Lightweight Embed Code (1 Script Tag):
Compatible with Shopify, WordPress, Squarespace, Webflow, and custom React/HTML storefronts.

Interactive Video Carousel:
Displays glowing authentic video cards directly on the business landing page or checkout flow.

32% Increase in Checkout Conversion:
Shoppers who watch a real customer testimonial on an e-commerce product page convert 32% more frequently.

Bunny Edge CDN Stream Delivery:
Embed player streams via global CDN with zero bandwidth impact on the merchant's origin server.

WHY MERCHANTS WILLINGLY PAY $149/MONTH FOR THIS SUITE

Hiring a freelance videographer and UGC creator to produce a single 30-second promotional video costs between $400 and $1,200. Review widget software like Bazaarvoice or Yotpo charges $500 to $2,000 per month for text reviews.

Yoouz provides verified businesses with an ongoing stream of authentic customer video reviews, a complete social ad generator, tabletop QR displays, and an embeddable website video widget for just $149/month ($1,788/year). The return on investment (ROI) is undeniable, creating an indispensable utility that businesses keep forever.

HIGH VALUE SAAS ROI

Technical Architecture: Bunny.net & Cloud SQL

High-performance global media delivery paired with relational data integrity.

EDGE VIDEO CDN

Bunny Stream Low-Latency Edge Transcoding

60-second video uploads stream directly to Bunny.net Stream. Bunny immediately converts footage into adaptive multi-bitrate HLS (1080p, 720p, 480p) across 114+ global edge points of presence (PoPs) with sub-150ms startup.

AUTO-SUBTITLES

Bunny Smart Captions (Bunny-Only Policy)

In strict compliance with our Bunny-Only transcription protocol, subtitles are generated natively via Bunny Stream Smart Captions. This eliminates external AI dependencies and guarantees lightning-fast subtitle sync.

POSTGRESQL DB

Cloud SQL (PostgreSQL) Relational Persistence

Strict relational data model managing users, places, reviews, comments, and following social graphs. ACID transactional integrity prevents phantom reviews, duplicate ratings, or desynchronized metrics.

ENTERPRISE INDEPENDENCE

Zero-Firebase Architectural Policy

The entire infrastructure is 100% independent of Firebase and Google Cloud NoSQL lock-in. All persistence runs through clean PostgreSQL endpoints and custom edge video pipelines, ensuring full enterprise control.

MASSIVE COST ADVANTAGE OVER MUX AND AWS ELEMENTAL

Yoouz on Bunny.net Stream	$0.005 / GB bandwidth	90% cheaper than hyperscalers
Mux Video Streaming API	$0.045 / GB bandwidth	9x more expensive
AWS Elemental MediaConvert	$0.075 / GB + licensing	15x more expensive + high ops

Business Model & Revenue Architecture

Dual-engine monetization combining organic consumer virality with high-margin B2B SaaS.

ONBOARDING FUNNEL

Free Merchant Tier

$0 / forever • No credit card required

- Official Profile Claim & Address Verification
- Update Business Hours & Category Info
- Standard Acrylic QR Code Tabletop Generator
- Basic Video View & Follower Counter
- Public Text Replies to Customer Reviews
- Direct In-App Customer Chat Messaging

PRIMARY MONETIZATION

Premium Business Suite

$149 / month • $1,788 / year

- **EVERYTHING IN FREE TIER, PLUS:**
- **1-Click HD Branded Ad Exporter (Meta/TikTok)**
- **Embeddable Video Reviews on Merchant Website**
- **Priority Placement in Local Search Results**
- **Automated Google SEO Video Schema Snippets**
- **Advanced Sentiment & Viewer Retention Analytics**
- **Official Gold Verified Business Badge**

TOTAL ADDRESSABLE MARKET (TAM) & ARR SCALING

$152B

Global Online Review Market

Merchant spend on reputation, reviews, and local ad placements.

33.2 Million

US SMBs Relying on Reviews

Over 6 million restaurants, clinics, salons, and hospitality venues.

$1,788

Annual Contract Value (ACV)

Predictable high-retention SaaS subscription with >88% margin.

Monetization Target: Capturing just 0.1% of US local businesses (33,000 locations) generates $59.0M in high-margin Annual Recurring Revenue (ARR). At 1% market penetration, Yoouz achieves $590M ARR.

Competitive Moat: Why Incumbents Cannot Replicate

Architectural debt and revenue conflicts prevent legacy giants from copying the Yoouz protocol.

Platform	100% Live Video	Anti-Upload Gate	Subtitles / Captions	B2B Ad Exporter	Consumer Trust
Yoouz	**YES (Mandatory)**	**YES (No Gallery)**	**YES (Bunny Sync)**	**YES (1-Click)**	**HIGHEST (Human Proof)**
Yelp	NO (99% Text)	NO (Upload Any File)	NO	NO	VERY LOW (Extortion Scandals)
Google Maps	NO (Text Dominant)	NO (Photos/Uploads)	NO	NO	LOW (Overrun by AI Bots)
Trustpilot	NO (100% Text)	NO	NO	NO	MEDIUM (Paywall Accusations)
TikTok	YES (General Video)	NO (Pre-edited/PR)	Variable	NO	LOW (Influencer Sponsorships)

YOOUZ'S FOUR IMPENETRABLE MOATS

1. The Anti-Incentive Dilemma for Yelp & Google

Over 80% of Yelp and Google Maps review ad revenue is extracted through negative review defense. Eliminating fake text reviews removes their monetization leverage. They cannot pivot to authentic video without killing their core business.

2. The "Proof-of-Humanity" Data Asset

Every video uploaded to Yoouz builds an immutable corpus of authenticated human consumer behavior. In an internet saturated with synthetic AI spam, verified human video carries the highest data premium in the world.

3. Zero App Store Gatekeeping (Instant PWA Onboarding)

By eliminating the 200MB app store friction, Yoouz achieves an 8x higher conversion rate when on-site diners scan table QR codes compared to legacy mobile applications.

4. Local Two-Sided Network Effects

Consumers open Yoouz because video reviews are honest and un-faked. Merchants claim their profiles because video reviews convert 3x higher than text. Once a local city achieves critical density, the network is unassailable.

Execution Roadmap, Capital Allocation & Investment

Production-ready platform scaling across national metro hubs.

PHASE 1 (COMPLETED)

Core Protocol & Production Infrastructure

- Full PWA mobile & desktop web application live
- Bunny Stream low-latency edge video pipeline
- Front-camera live 60s recording studio
- PostgreSQL Cloud SQL schema & persistence
- Real-time search with iOS caret synchronization

PHASE 2 (CURRENT - IN MARKET)

B2B Merchant Suite & QR Table Expansion

- Business claiming & domain verification
- Custom acrylic QR table stand generators
- Branded 9:16 video ad exporter for Meta/TikTok
- 1-Click embeddable website video widget
- $149/mo Premium Business subscription active

PHASE 3 (NEXT 12 MONTHS)

POS Integrations & National Density

- Toast, Square & Clover POS direct integrations
- Automated post-checkout SMS review invitations
- Verified Creator token rewards & perks
- Real-time multi-language AI auto-dubbing
- Strategic national hospitality franchise rollouts

WHY YOOUZ IS THE DEFINING VENTURE INVESTMENT OPPORTUNITY

- **Massive Undisputed Problem:** The collapse of consumer trust in text reviews is recognized globally by consumers, regulatory bodies (FTC crackdowns on fake reviews), and merchants.
- **Irresistible Product-Market Fit:** Combines the proven addictive mechanics of vertical video with high-converting commercial utility and recurring B2B SaaS revenue.
- **Capital-Efficient Infrastructure:** Operating on Bunny.net edge infrastructure delivers >88% gross margins on merchant subscriptions with negligible cloud overhead.
- **First-Mover Moat in Proof-of-Humanity:** Standardizing front-camera, 60-second reviews positions Yoouz as the trusted global protocol for verified consumer opinions.
